Who is this book intended for?

This book is intended for all the enthusiastic owners of digital cameras, regardless of their age and level of education. It could be your first book about photography. My intention as the author - and a teacher of photography - is to encourage your interest in photography.

The ability to take pictures is a creative skill of a cultural educated person.

Why to read this e-book?

In today's modern world of digital technology it is usual that you take into your hands a mobile phone, a smartphone, a tablet, a digital compact, bridge or a DSLR camera and you try to make a good photo. You rely on the amazing abilities of the intelligent electronics. You have been convinced that *"it makes photos itself!"* Despite the great advertising, the created photos do not meet your expectations. You are disappointed. You look for a way to make things right. You ask your friends, search on the internet, buy books.

Today's books about photography are full of amazing pictures, quick guides and guaranteed tricks to make perfect photos. Some authors offer a quick response:

"Hey Scott, how should I take a picture of this flower?"

"Just look in the right way and do this with your camera..."

They don't deal with explaining the basic concepts, they go straight to the point. These authors have (unfortunately) already forgotten how they learned to make photos. They have forgotten how they obtained their particular abilities. They describe taking pictures as something natural. They say that *"it is enough to have eyes"*, after all it's that simple. You are impressed by their instructions. You try their tricks but the magic disappears. Once again you remain alone with these unanswered questions:

How should I get rid of the automatic mode?

What should I set up so that the photos meet my expectations?

In this e-book we will answer the questions that keep troubling a beginning photographer like you.

How to learn to take pictures?

Photography, like other skills of people, consists of sequential abilities, steps. These lead a person to his/her overall ability to create or control something.

How do you acquire these skills?

Just remember, for example, how you learned to ride a bike in childhood. At first you didn't know where to put your feet, what to do with your hands, how to strike the pedals and maintain your balance and direction at the same time. You were falling, it was difficult for you. However, little by little you involved different activities of this skill into a whole. And suddenly, hop! You gained control of riding and started enjoying the speed and graceful movements. From that moment on you will never forget how to ride a bike. Over some time, it is you who gives advice about cycling to a beginner and you wonder: „*What does that clumsy one do with his/her legs? Why does he/she often lean on one side and loses his/her balance? I mean, riding a bike is so easy!*”

Now think of the tricks and tips of the authors of the books on photography that I have mentioned. Do you want to be able to take pictures? Just look in the right way and press the release, I mean, it's so easy! These authors have already forgotten how many little steps they had to do before they learned to take pictures. Today, it is nothing more for them than one complex skill which they control. And they wonder how come that the others do not understand it.

Do you understand now how learning works?

As a teacher of photography I can see the difficulties in making the first steps on a daily basis. Knowing how to gradually join these steps into a whole is difficult until the right moment comes and you'll suddenly know how to make a good photograph.

In this book I will give you tips on **how easy it is to learn to take pictures in a step-by-step way**.

I will acquaint you with my method of teaching. It is simple, perhaps it will surprise you. It is based on remembering a few questions, on being able to ask them yourself always at the right moment and on being able to answer them correctly according to the situation.

I am offering you a step-by-step teaching method through which I have been successfully teaching the beginning photographers for five years. I have named this method the **Total Picture Control**.

Find out how to get the content of your photographs under control.

CHAPTER 1

The basic
questions
of an educated
photographer

Do you also have some of the troubles that I mentioned in the previous section? Are you looking for a solution to these problems? Are you looking for simple answers to the question "what am I doing wrong?"

In each of my textbooks my aim is to teach you the photographic techniques in a simple way. I have created a teaching method called **Total Picture Control**, which is based on a few very simple questions. What do these questions and in particular the right answers to them mean to an educated photographer? I will briefly explain you their importance:

What lens should I use?

By selecting the properties of the lens a photographer decides what from the photographed scene will be captured in the photograph and how the perspective of the space that he/she can see in front of himself/herself will be captured.

Where should I stand?

The choice of the place from which the photographer takes the photograph, together with the properties of the lens will determine the size of the objects as well as the mutual proportions between the foreground and the background of the picture.

Where should I focus?

By focusing a point in the image area a photographer guides the eyes of the viewer of a photograph and, as a rule, he/she determines what will be its central theme.

What shutter speed should I use?

By choosing the shutter speed (the length of the exposure time) a photographer decides how the objects in motion will be captured in the photo.

What F-number should I use?

By setting the F-number (the aperture value) a photographer creates the sharp and blurred places in the photograph.

What white balance should I set?

By setting the properties of light of the photographed scene (the so called white balance) a photographer decides how truly will the colours of the photographed scene be captured in the photograph.

The first three questions are dealt with in this e-book in separate chapters and practical exercises. I will teach you the meaning of each question. I will explain to you what you will reach by answering each question correctly and you will also see the results in the example photos. In the practical exercises I will teach you to answer the questions correctly and to apply them properly in practice. Each chapter and a practical exercise will take no more than a half an hour of your time. With each question and practical exercise you will acquire new knowledge and skills. When you combine these skills into a whole you will be able to make a technically correct photo.

The last three questions are dealt with in separate textbooks:

What shutter speed should I use?

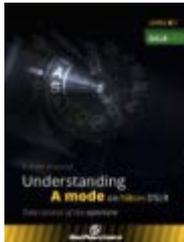

Understanding S mode on Nikon DSLR - Take control of shutter speed

A photography e-book dedicated to correct setting of exposure time on your Nikon DSLR that will guide you step by step through all aspects of exposure time in the digital photography.

What F-number should I use?

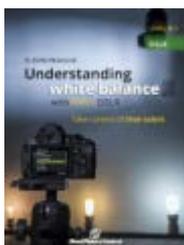

Understanding A mode on Nikon DSLR - Take control of the aperture

A photography e-book dedicated to correct setting of the aperture on your Nikon DSLR that will make you understand all aspects of the aperture in the digital photography step by step.

What white balance should I set?

Understanding white balance with Nikon DSLR - Take control of true colors

A photography e-book dedicated to correct setting of white balance on your Nikon DSLR that will explain how to achieve true colours of your shots under any circumstance step by step.

Summary of knowledge

REMEMBER THIS!

Do you want to start taking pictures properly? Do you want your pictures to have success with viewers?

I'll give you some important advice:

Taking photographs is not merely looking for correct answers to the question "what should I set?".

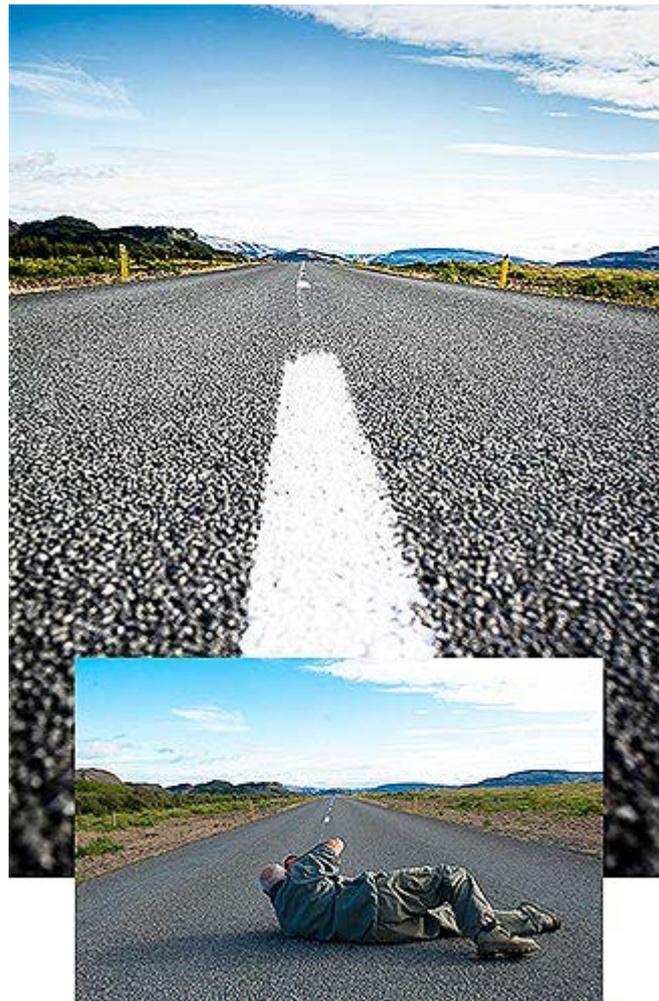

The ability to take photographs is a creative skill of a cultural educated person.

If you want to start taking pictures properly, stop doing it like a tourist does: **A tourist photographs "the way he/she can see".**

If you want to create eye-catching photographs that will have success with viewers - become a

photographer - start to take photographs! **A photographer creates the image.**

Remember: A photographer takes photographs of ordinary things in an extraordinary way.

What is Total Picture Control?

As a teacher of photography I am constantly faced with the fact that a beginning photographer understands photographing as a question of setting the camera correctly. He/she dedicates all the time and energy to studying of instructions for use, checking the discussion forums on the internet and reading books about photography whose authors have (unfortunately) already forgotten how they learned their individual skills and who describe photographing as something natural, claiming that it is enough to have eyes.

It is very difficult to learn how to take pictures in the right way and to understand this comprehensive ability of a person at once. That's why I have divided the teaching of these comprehensive skills into several simple steps. I have formulated the right procedure to do these steps into **6 simple questions**. I have named this method of teaching the **Total picture control**. Using this method I have been teaching photographic classes and giving specialized lectures, in which thousands of beginning photographers, irrespective of their gender and age, have taken part.

Now I am offering you the most comprehensive edition of textbooks on photography created by this method:

Total Picture Control is a complete edition of textbooks about photographing

Under the title **Total Picture Control** am offering you a complete edition of textbooks about photography. Such an edition cannot be found in the offer of any other publisher. What makes it so unique?

1. The textbooks are classified into **levels according to their degree of knowledge** – from beginner to master level
2. The individual **titles are interlinked within the same level of knowledge** according to the discussed topics.
3. The titles are also interlinked **in the growing level** depending on the extent of knowledge
4. The titles are offered **individually or grouped into sets** – in this way you can get a complete set of knowledge and, of course, **for a bargain price!**

Educate yourself! Reach to the top of the photographic knowledge - **The Total Picture Control is your right way to the top!**
